Using Pigment and Dye process UltraChrome-K3 Process .

The new **Polar Pearl Metallic** is a truly unique inkjet paper that closely matches the look of photo lab metallic prints. Polar Pearl Metallic features the same aspects as its lab equivalent - a high gloss finish and a pearlescent base stock that yields an elegant iridescence in your images.

LuxArt Satin Rag is an extraordinary example of inkjet media designed strictly for the best in photographic artistry. This innovative paper features a 100% cotton base with the finest satin coating available today. The results are ultra deep blacks and a superior tonal range. With the timeless character of traditional fiber-based photo paper, LuxArt brings a special artistic element that will illuminate your creative work.

86lb DUO

Double Sided True High Gloss Compatible with Dye and

DUO features a high gloss surface on both sides for brilliant photo reproduction with dye and pigment inks. This double sided inkjet paper is unique because of its sturdy 14mil thickness and range of printer compatibility.

Arctic Polar Satin

Its crisp white shade insures your images will project more brilliance. The state of the art microporous coating will enhance details and color saturation. Arctic Satin features a low-depth luster finish perfect for photos where glossy reflections are not desirable.

- **Satin Texture:** Shallow
- **Paper Tone:** Bold Bright White
- **Paper Weight:** 66lb (266gsm)

75lb Arctic Polar Luster

Arctic Luster features a deep luster finish which offers the perfect balance between deeply saturated color and minimized gloss reflectivity. Pigment Process

- Optimized for pigment inks with minimal bronzing and gloss differential
- Extra coating layer on back helps slow fade with dye inks
- 11.8mil photo thickness
- Acid free base stock. Coating slightly acidic.
- Cool white paper tonality

Size	Paper	Price
